

1. ▪ $x = 3 - 4t \Rightarrow \star: \frac{-x+3}{4} = t$
 ▪ $y = 2 - 3t \xRightarrow{\star} y = 2 - 3\left(\frac{-x+3}{4}\right) \equiv y = \frac{3x}{4} - \frac{1}{4}$

2. ▪ $x = 1 - t^2$
 ▪ $y = t - 2$
 ▪ $-2 \leq t \leq 2$
 ▪ No es función

3. ▪ $x = t^2 + t$
 ▪ $y = t^2 - t$
 ▪ $-2 \leq t \leq 2$
 ▪ No es función

4. ▪ $x = t^2$
 ▪ $y = t^3 - 4t$
 ▪ $-3 \leq t \leq 3$
 ▪ No es función
