$$f(x,y) = \begin{cases} \frac{2xy}{x^2 + y^2} & si\ (x,y) \neq (0,0) \\ 0 & si\ (x,y) = (0,0) \end{cases}$$

• 
$$x = 0 \Rightarrow \lim_{y \to 0} \frac{0}{y^2} = 0$$

• 
$$y = 0 \Rightarrow \lim_{x \to 1} \frac{0}{x^2} = 0$$

$$y = x \Rightarrow \lim_{x \to 1} \frac{2x^2}{2x^2} = 1$$

Porque no existe el limite
